## Product Description

# High Transmittance IP65 LED Poultry Bulb Waterproof For Pullet Chick Broiler Raising

## Why is 2700K the Optimal Color Temperature for Laying Hens?

Because chickens perceive the visible spectrum differently than humans, the spectral output of poultry LED lights should differ from that of commercial lighting. Poultry lights utilize a combination of red, blue, and green light sources, which can help chickens grow healthily and enhance their egg-laying capacity. Therefore, a color temperature of 2700K is considered the best choice for laying hens.
